

SCIENCE LEADS TO BELIEF IN GOD (PART 5)

“I believe in God. In fact, I believe in a personal God who acts in and interacts with the creation. I believe that the observations about the orderliness of the physical universe, and the apparently exceptional fine-tuning of the conditions of the universe for the development of life suggest that an intelligent Creator is responsible.”

“I believe in God because of a personal faith, a faith that is consistent with what I know about science.”

“Being an ordinary scientist and an ordinary Christian seems perfectly natural to me. It is also perfectly natural for the many scientists I know who are also people of deep religious faith.”

—William D. Phillips, 1997 Nobel Prize in Physics

“I build molecules for a living. I can’t begin to tell you how difficult that job is. I stand in awe of God because of what he has done through His creation. My faith has been increased through my research. Only a rookie who knows nothing about science would say science takes away from faith. If you really study science, it will bring you closer to God.”

—James Tour, World-renowned nanoscientist.

“If the universe had not been made with the most exacting precision we could never have come into existence. It is my view that these circumstances indicate the universe was created for man to live in.”

—John A. O’Keefe, NASA astrophysicist.

“If we need an atheist for a debate, we go to the philosophy department. The physics department isn’t much use.”

—Robert Griffiths, Heinemann Prize in Mathematical Physics.

“I believe in God. It makes no sense to me to assume that the Universe and our existence is just a cosmic accident, that life emerged due to random physical processes in an environment which simply happened to have the right properties. As a Christian I begin to comprehend what life is all about through belief in a Creator, some of whose nature was revealed by a man born about 2000 years ago.”

—Antony Hewish, 1974 Nobel Prize in Physics.
