

HEALING OF LIVER CIRRHOSIS

—The Testimony of Tanja Cebic—

December 24, 2024

My name is Tanja and I came to visit Saint Nektarios Monastery several times, for prayers for my health. I have liver cirrhosis due to rare genetic disease. The first time I visited, I felt such as Saint Nektarios invited me. After the first visit my health improved greatly. For years doctors were monitoring a lesion on my liver and tested me for cancer, while screening me every six months.

On December 3, 2022 I visited the Monastery for prayers. The next day, Monday, I was due for a liver screening. The results came back negative, with no lesion present; the lesion size was around 1cm. I asked my doctor how this is possible, and he said, “with you everything goes in the opposite direction; because your liver should be decomposing.” Since then, the lesion has never appeared again, by the mercy of God and His wonderworker Saint Nektarios, and my liver condition is stable. I am deeply grateful for your kindness and prayers for me and my family. I wish I could say more, but it is not possible to express how blessed I feel.
